

Amendments to the Specification:

Please add the following new paragraph on page 6 of the substitute specification, between lines 28 and 29:

5

From Fig. 4B and the above description, it will be clear to those of ordinary skill in the art that the flange 17 has a first flange portion comprising a first plurality of individual wires which are crossed by the length L of the beginning 22 of the current supply wire, the length L therefore being attached to but electrically insulated from this first plurality of individual wires. The flange 17 has
10 a second flange portion extending outwardly from the first flange portion, comprising a second plurality of individual wires which are free from impression by crossing wires, to which the current supply wire is not attached.
